FIXED WALL

802080

PRODUCT DESCRIPTION

The PELLET fixed shower screen allows free walk-in access to your shower.

The 6 mm thick safety glass with anti-limescale treatment provides increased strength and prevents limescale deposition for easy maintenance.

The screen-printed strips allow you to shower in complete privacy.

With a height of 1950 mm, this wall prevents splashing.

Reversible right/left, it adapts to your needs and your shower configuration.

To ensure easy and durable installation, the wall is supplied with 2 glossy polished aluminium profiles: a standard 35 mm profile for a sleek design and an 80 mm wide profile.

Also supplied with the wall is an adjustable and telescopic stiffener with articulated ends allowing it to be positioned at 90 or 45 degrees.

To complete your installation, a 180° swivel shutter can be added to the fixed wall.

This wall is available in 3 widths 800 mm, 900 mm and 1200 mm; the 800 mm and 900 mm widths are pre-drilled to accommodate a 500 mm Arsis straight bar (included) that can be used as a grab bar (if installed inside the shower) or as a towel rail (if installed outside the shower).
