

SLIDING WALL

802140

PRODUCT DESCRIPTION

The PELLET sliding shower screen is composed of a fixed part and a sliding part on a rail placed on the tray.

The 6 mm thick safety glass with anti-limescale treatment provides increased strength and prevents limescale deposition for easy maintenance.

The screen-printed strips allow you to shower in complete privacy.

With a height of 1950 mm, this wall prevents splashing.

Available in Right or Left, it adapts to your needs and your shower configuration.

To ensure easy and durable installation, the wall is supplied with 2 glossy polished aluminium profiles: a standard 35 mm profile for a sleek design and an 80 mm wide profile.

Also supplied with the wall is an adjustable and telescopic stiffener with articulated ends allowing it to be positioned at 90 or 45 degrees.

This wall is available in 3 widths 1400 mm, 1600 mm and 1800 mm and fits perfectly with FITÉO shower trays.
